DR ANDREW L. VITIELLO

FRCC PHD MCHIRO BSC GRADCERTLD

OVERVIEW

This portfolio presents seven selected exhibits from over 20 years across Australian and United Kingdom higher education. Each exhibit demonstrates specific capabilities in curriculum design, educational design, programme accreditation, research, governance, and AI in education.

The exhibits are curated rather than exhaustive. They are selected to show the breadth of work, the seniority and scale at which it has operated, and the consistent thread that runs through it: **software-agnostic, pedagogy-led design grounded in evidence-based practice.**

WHO AM I AND WHAT DO I STAND FOR?

I am an academic developer and senior educational designer with over 20 years across Australian and United Kingdom higher education. My work sits at the intersection of curriculum design, programme accreditation, evidence-based pedagogy, and AI in higher education.

I stand for software-agnostic, pedagogy-led design grounded in evidence; for systematic, sole-authored scholarship that adds named contributions to the field; and for cross-disciplinary practice that translates clinical and professional rigour into educational outcomes.

EXHIBITS IN THIS PORTFOLIO

- 1 **Embedding Work-Integrated Learning at Scale.** University of Sydney, 2024 to 2025
- 2 **Master of Clinical Chiropractic: Full-Cycle Programme Design.** Central Queensland University, 2016 to 2022
- 3 **Case Weeks: Bespoke Problem-Based Learning Platform.** Health Sciences University, 2008 to 2016
- 4 **CHESEMELT: A Reflective Practice Framework for Higher Education.** Sole-authored research, 2026
- 5 **Urban Technology Scout: AI-Powered Student Companion (Concept).** UTS Graduate Certificate of Learning Design and Technology, 2025
- 6 **Heidi Health AI Vendor Due Diligence Assessment.** Peak Body board advisory document, 2026
- 7 **Articulate 360 Enterprise Licensing Board Paper.** Chiropractic Australia, 2026

WHY MY WORK HAS VALUE

My work creates value across three interconnected dimensions. It is impactful at the scale at which higher education actually operates, future-focused in its engagement with the technologies and pedagogies that will define the next decade, and evidence-based in its grounding in published research and verifiable outcomes.

IMPACTFUL

I lead curriculum work at scale. Recent examples include embedding work-integrated learning across the Faculty of Arts and Social Sciences capstone unit at the University of Sydney (approximately 2,000 students per year), securing five-year accreditation without conditions for the Master of Clinical Chiropractic at Central Queensland University, and designing learning experiences for approximately 3,000 students across five degree programmes at Health Sciences University.

FUTURE FOCUSED

I am pursuing an active research programme on the future of higher education: CHESEMELT (a reflective practice framework, in submission to HERD), Beyond Detection (a three-pillar approach to AI in Australian higher education aligned with TEQSA's 2026 changes), and Sustainable Intelligence (a national AI infrastructure proposal for the sector). My recent vendor and tool assessments demonstrate AI fluency in public facing allied health practice.

EVIDENCE-BASED

All my design work is grounded in published research literature. My peer-reviewed publication record (h-index of 10) spans clinical and educational topics, with five recent publications and a sixth (CHESEMELT) currently in submission to a Q1 journal. My approach to curriculum, accreditation, and AI evaluation rests on systematically applying evidence to practice.

FUTURE GOALS

Looking ahead, I am building a body of work that integrates curriculum innovation, AI literacy, and evidence-based practice across higher education and the regulated health professions. The next two years will see manuscript publication, deeper engagement with central university curriculum and policy work, and continued contribution to professional governance through the professions peak body, Chiropractic Australia.

"Curriculum, AI, and evidence are the same concern in three voices. The work is to keep them in productive conversation."

Three sole- and lead-authored manuscripts are progressing toward publication in 2026: CHESEMELT in submission to Higher Education Research and Development; Beyond Detection in preparation; and Sustainable Intelligence in preparation. Each contributes a named addition to the field rather than incremental commentary.

Building on my recent University of Sydney faculty contract, I am pursuing central curriculum and policy roles in Australian higher education, where individual course reviews aggregate into institutional capability and continuous improvement. My central curriculum work is the natural complement to faculty curriculum design and renewal.

As Vice President of Chiropractic Australia, I continue to author governance papers and policy positions that connect academic and professional standards. The 2026 priorities include enterprise capability decisions, AI-in-clinical-practice guidance, and regulator-facing standards.

1

EMBEDDING WORK-INTEGRATED LEARNING AT SCALE.

UNIVERSITY OF SYDNEY, 2024 TO 2025

CONTEXT

FASS3999 is the capstone unit of the Faculty of Arts and Social Sciences degree programme at the University of Sydney, enrolling approximately 2,000 final-year undergraduate students per year across Language, Arts and Social Sciences disciplines. The Faculty's Education, Enterprise and Engagement (EEE) team in the Office of the Deputy Vice-Chancellor (Education), under Professor Felicity Blackstock, identified an opportunity to deepen the unit's work-integrated learning components and bring authentic industry engagement into the capstone experience at scale.

BRIEF AND APPROACH

Working as Senior Educational Designer (Contract) within the EEE team, I partnered with academic subject matter experts across multiple Faculty schools to design and embed enhanced work-integrated learning components into the capstone unit, while remaining aligned with AQF requirements and Faculty quality standards. The approach was iterative, learner-centred, and built around clear post-implementation review structures so the work could continue to improve cycle to cycle.

WHAT I DID

- Embedded increased work-integrated learning (WIL) components into FASS3999, the capstone unit serving approximately 2,000 students per year.
- Led nine major curriculum redesign initiatives across Language, Arts and Social Sciences programmes.
- Built reusable digital learning templates, design guidelines, and documentation standards to support consistent learner experience.
- Established learner feedback systems and post-implementation review structures to drive continuous improvement.
- Reported on programme priorities, status, and timelines to support operational planning across the EEE team.

WORK-INTEGRATED LEARNING

CURRICULUM REDESIGN

INDUSTRY ENGAGEMENT

OUTCOMES

- Curriculum redesigns delivered to schedule, with post-implementation review systems in place for ongoing iteration.
- Reusable design templates produced and adopted within the Faculty for use across multiple-programmes.

DEMONSTRATED CAPABILITIES

Curriculum design • Work-integrated learning • Stakeholder partnership • Quality assurance • Multi-faculty work

2

MCLINICAL CHIROPRACTIC: FULL-CYCLE PROGRAMME DESIGN.

CENTRAL QUEENSLAND UNIVERSITY, 2016 TO 2022

CONTEXT

Central Queensland University's School of Health, Medical and Applied Sciences was establishing a postgraduate clinical chiropractic programme to be delivered across two campuses. The programme required the full design lifecycle from initial concept through to external accreditation by the Council on Chiropractic Education Australasia, alongside operational integration into a complex matrix organisation.

BRIEF AND APPROACH

As Master Programme Coordinator and Head of Campus, I led the design, development, and accreditation of the Master of Clinical Chiropractic, with concurrent responsibility for academic operations across two campuses. The approach combined evidence-based curriculum design, novel clinical assessment formats, and the structured documentation required to support an external accreditation submission of national significance to the profession.

WHAT I DID

- Led the design and development of curriculum content and assessment architecture across the full design lifecycle, from concept to accreditation submission.
- Coordinated the accreditation submission with the Council on Chiropractic Education Australasia, including evidence preparation and panel engagement.
- Directed curriculum and academic operations across two campuses for approximately 2,500 students across five health disciplines.
- Led a team of seven academic staff in clinical curriculum delivery, OSCE design, and placement-based learning.
- Introduced novel clinical assessment formats including video-based practical examinations, podcast-styled clinical interviews, and infographic summative assessment.

INNOVATIVE ASSESSMENT

PROGRAMME DESIGN

ACCREDITATION

OUTCOMES

- Five-year accreditation secured without conditions or recommendations from the Council on Chiropractic Education Australasia, the strongest possible accreditation outcome.
- Programme delivered successfully across two campuses with novel assessment formats raising learner engagement while reducing achievement gaps.

DEMONSTRATED CAPABILITIES

Programme design • External accreditation • Regulator engagement • Clinical assessment • Multi-campus leadership

3

CASE WEEKS: BESPOKE PROBLEM-BASED LEARNING PLATFORM.

HEALTH SCIENCES UNIVERSITY, 2008 TO 2016

CONTEXT

Health Sciences University (formerly AECC University College) sought to deepen problem-based learning across its undergraduate health professional programmes, with particular emphasis on integrating clinical reasoning and patient-safety thinking into formative and summative assessment. Existing platforms were not fitting the pedagogical brief, prompting the design of something purpose-built.

BRIEF AND APPROACH

I designed and built Case Weeks, a bespoke web-based problem-based learning platform on the Moodle VLE, embedding scenario-driven assessment that elevated learner engagement and critical thinking. The approach treated software selection as following the design brief rather than the other way around: the pedagogy required the platform, and the platform was built to serve the pedagogy.

WHAT I DID

- Designed the scenario-driven assessment architecture from the pedagogical brief outwards.
- Built the platform on the Moodle VLE, configuring it to support the assessment workflow.
- Embedded clinical-reasoning scenarios and patient-safety considerations into formative and summative assessment.
- Coordinated with academic staff across multiple cohorts to develop platform content.
- Delivered learning experiences for approximately 3,000 students across five degree programmes during the role, working with in FHEQ and QAA quality frameworks.

PROBLEM-BASED LEARNING

SCENARIO-DRIVEN ASSESSMENT

MOODLE PLATFORM BUILD

OUTCOMES

- Elevated learner engagement and critical-thinking outcomes across the cohorts using the platform.
- Established a model of bespoke, pedagogy-led platform design that informed subsequent curriculum innovation across the institution.

DEMONSTRATED CAPABILITIES

Digital learning design • Problem-based learning • Platform build • Moodle VLE • Scenario-driven assessment

4

CHESEMELT: A REFLECTIVE PRACTICE FRAMEWORK

SOLE-AUTHORED RESEARCH, HERD SUBMISSION, 2026

CONTEXT

Existing reflective practice frameworks in higher education provide useful structure but lack a systematic diagnostic capability and a named treatment for explicit failure analysis. The gap is particularly acute in clinical and professional education, where reflective practice is foundational to safe and effective practice and directly named in registered profession standards.

BRIEF AND APPROACH

I identified the gap, drew on the metacognition, evidence-based practice, and clinical reasoning literatures, and developed CHESEMELT as a six-step framework with five diagnostic questions and a named category for failure autopsy. The architecture inherits from Willison's MELT framework (Willison and O'Regan, 2007) while contributing three named additions to the field. The work is sole-authored.

WHAT I DID

- Authored a 28,189-word manuscript across six sections, with 44 APA7 references.
- Developed five diagnostic questions, the six-step CHESEMELT methodology (Central Concern, Problem Reframing, Knowledge/Skill Assessment, Collaborative Approach, Monitor, Apply), and the named category of failure autopsy.
- Prepared the full submission package: anonymised assembly, abstract, reference list, cover letter, online supplement with three worked cases.

DIAGNOSTIC FRAMEWORK

REFLECTIVE PRACTICE

FAILURE AUTOPSY

OUTCOMES

- In submission to Higher Education Research and Development (Q1 journal, impact factor 4.93), with Reflective Practice as a strategic fallback.
- Three contributions to the reflective practice field: five diagnostic questions, the six-step framework, and failure autopsy as a named category.

DEMONSTRATED CAPABILITIES

Sole-authored scholarship • Framework design • Reflective practice • Manuscript preparation • Q1 publication

5

URBAN TECHNOLOGY SCOUT: AI-POWERED STUDENT COMPANION.

UTS GRAD CERT OF LEARNING DESIGN & TECH, 2025

CONTEXT

First-year international students at urban Australian universities frequently experience navigation, language, and cultural acclimatisation stresses that elevate cortisol and impair the working memory and attention required for academic learning (McEwen, 2007; Vogel & Schwabe, 2016; Cordova et al, 2023). The opportunity is to design a learning support intervention that proactively manages these stress triggers rather than addressing them reactively.

BRIEF AND APPROACH

Working in the Predict subject of the UTS Graduate Certificate of Learning Design and Technology, I designed Urban Technology Scout (UTS), a generative AI mobile application concept whose abbreviation deliberately echoes the institution. The design grounds itself in cognitive load theory (Sweller, 2011), social cognitive theory (Bandura, 1991), personalisation theory, and the stress-and-learning research above. The brief required a 90-second prototype demonstration and a 5-minute pitch presentation justifying the design choices.

WHAT I DID

- Designed the AI application concept end to end, including timetable sync, real-time navigation with predictive notifications, alternative routing during peak periods, multilingual support, and behaviour-pattern learning for personalised recommendations.
- Authored the supporting design scenario document grounding each feature in published learning design and stress-and-learning literature.
- Produced every aspect of the 90-second prototype demonstration video and the 5-minute pitch video, including script, voiceover, visual design, and editing.
- Used generative AI tools transparently for grammar, clarity, and image generation, with use declared in the reference list.

GENERATIVE AI

LEARNING DESIGN

STUDENT WELLBEING

OUTCOMES

- High Distinction grade for both Assignment 1 (design scenario) and Assignment 2 (pitch video).
- Urban Technology Scout (UTS) Pitch video at youtu.be/vRWXFCRQQoU and prototype demonstration at <https://youtu.be/Z8FqIZXo9JU>.

DEMONSTRATED CAPABILITIES

AI in education • Learning design • Video production • Theoretical grounding • Future-focused thinking

6

HEIDI HEALTH AI VENDOR DUE DILIGENCE ASSESSMENT.

PEAK BODY BOARD ADVISORY DOCUMENT, 2026

CONTEXT

Heidi Health is an AI clinical documentation product widely promoted to Australian primary care clinicians. Adoption is moving faster than the published evidence and contractual due diligence supporting it. As Vice President of Chiropractic Australia and an active scholar of AI in higher education and clinical settings, I undertook a formal vendor assessment for personal advisory use, structured against ten risk-management questions drawn from my prior 'AI in the Clinical Setting' presentation.

BRIEF AND APPROACH

The brief was to test the vendor against the same standards I had asked Chiropractic Australia members to apply to any AI clinical product. The approach was deliberately structured: ten domains, each assessed and given a verdict (green, amber, or red) with documented evidence. The output was a landscape A4 Word document suitable for either personal reference or, with adjustment, formal advisory use.

WHAT I DID

- Authored a structured ten-domain vendor due diligence document, applying consistent assessment criteria across each domain.
- Assigned an evidence-based verdict to each domain, with overall amber verdict supported by two red domains.
- Identified and documented two red domains: the absence of a peer-reviewed validation study naming Heidi specifically, and the contractual indemnity and liability provisions in clauses 11 and 12.2 of Heidi's Terms of Use.
- Produced an executive-style summary suitable for board or advisory committee use.

RISK MANAGEMENT

CLINICAL DOCUMENTATION

AI DUE DILIGENCE

OUTCOMES

- Internal personal advisory document used to inform engagement with the product and direct enquiries from clinician colleagues.
- Demonstrated structured AI vendor assessment, executive-level analytical writing, and the integration of evidence and contractual analysis.

DEMONSTRATED CAPABILITIES

AI vendor assessment • Risk analysis • Executive writing • Evidence-based practice • Contractual analysis

7

ARTICULATE 360 ENTERPRISE LICENSING BOARD PAPER.

CHIROPRACTIC AUSTRALIA, 2026

CONTEXT

Chiropractic Australia, the registered profession's national peak body, required a board-level governance paper recommending enterprise software licensing for the secretariat. The paper needed to translate operational learning design recommendations into board-ready documentation, with explicit framing of change as efficiency and capability improvement rather than as criticism of prior expenditure.

BRIEF AND APPROACH

Authored in my capacity as Vice President, the paper sat within an eight-page ceiling and used the financial rigour expected at board level: documented pricing baseline, RBA exchange rate as of decision date, and a recommended funding ceiling. A late structural revision added a section framing the case for change at the structural level, repositioning the proposal as a forward-looking efficiency improvement.

WHAT I DID

- Authored a seven-page board paper within the eight-page ceiling, including appendices.
- Restructured the paper to add a section framing change as efficiency and capability improvement rather than criticism of prior expenditure.

STRATEGIC FRAMING

BOARD GOVERNANCE

FINANCIAL RIGOUR

OUTCOMES

- Submitted to the Chiropractic Australia board for consideration which led to the successful purchase of multiple licenses.
- Demonstrated executive-level governance documentation translating operational recommendations into board-ready format.

DEMONSTRATED CAPABILITIES

Governance writing • Board documentation • Financial rigour • Strategic framing • Executive communication
